Introduction

What is Food Order Hub?

Food Order Hub is an online food ordering platform that allows users to browse restaurants and order food online.

Users can search food items, add them to cart, and place orders easily.

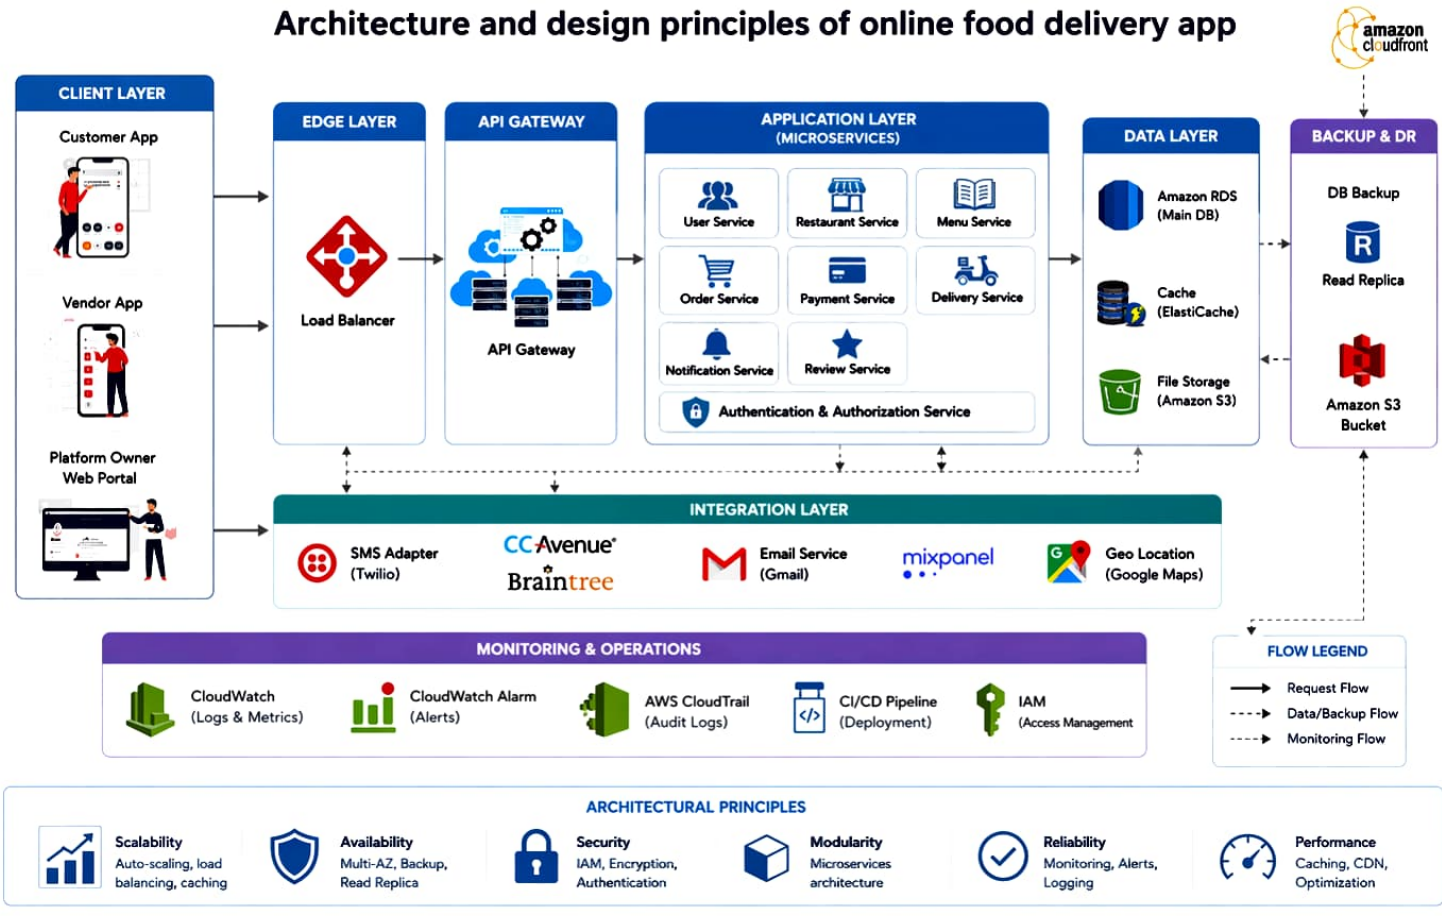
The platform provides a simple and user-friendly interface for seamless ordering.

Why this project?

Traditional food ordering takes more time through phone calls/manual processes.

Customers need a faster and more

Model Architecture



Problem Statement

- Customers often face difficulties such as:
- Long waiting times in restaurants
- Difficulty in checking menu availability
- Manual order processing errors
- Lack of convenient payment methods
- Solution:
- Food Order Hub solves these issues by:
- Providing an online ordering platform
- Allowing users to browse menus digitally
- Enabling secure online payments
- Reducing manual errors through automation

Aim & Objective

Aim:

To develop a web-based food ordering platform that simplifies food ordering for customers and improves restaurant efficiency.

Objectives:

Create a responsive food ordering website

Provide secure login authentication

Implement cart management system

Enable online payments

Improve user experience

Methodology:

Requirement gathering

UI/UX design

Frontend development

Backend integration

Database creation

Testing

Deployment

Results and Discussion:

Successfully built an online food ordering platform

Users can place orders smoothly

Faster ordering compared to traditional methods

Improved restaurant order management

Discussion:

Reduces customer waiting time

Increases convenience

Can be scaled for multiple restaurants
